WEEK 4

SUMMARIZER OUTPUT

```
PS D:\internships\infosys\Live-Meeting-Summarizer-Application\week 4> python summarizer.py

===== MEETING SUMMARY =====

**Meeting Overview**

The meeting involved discussing the specification and planning for a prototype. Key points that emerged from the discu
ssion include the potential duplication of effort, the need for a prototype within a week, and the feasibility of the
approach. The team also discussed data structures, the interface, and their compatibility with the Knight XML framewor
k.

**Key Discussion Points**

1. Potential duplication of effort and the need for a prototype within a week
2. Feasibility of the approach and the possibility of using pre-annotated data
3. Using a baseline for data that is not pre-annotated
4. Prioritizing the creation of a working prototype
5. Data structure and interface compatibility with the Knight XML framework
6. Distribution of tasks and data usage: online and offline

**Speaker Contributions**

1. **Speaker 2**: Suggested that the team should prioritize the creation of a prototype and review Steve's feedback on
 the specification.
2. **Speaker 3**: Proposed a plan for creating a prototype, which involves using pre-annotated data, focusing on the i
nterface first, and then replacing pieces with more sophisticated components.
3. **Speaker 4**: Suggested using random data for the user interface to facilitate testing.
4. **Speaker 5**: Pointed out that the combined measure might not be offline if it depends on the user's search input.
5. **Speaker 6**: Mentioned that their data usage will be mostly online, but their module will work mainly with offlin
e data.

3. **Speaker 4**: Suggested using random data for the user interface to facilitate testing.
4. **Speaker 5**: Pointed out that the combined measure might not be offline if it depends on the user's search input.
5. **Speaker 6**: Mentioned that their data usage will be mostly online, but their module will work mainly with offlin
e data.
6. **Speaker 1**: Generally agreed with the plan and suggestions.

**Action Items**

1. Review Steve's feedback on the specification
2. Create a prototype within a week
3. Develop a data structure and interface plan
4. Review Knight XML framework documentation
5. Investigate data usage and distribution among team members

**Decisions**

1. Prioritize the creation of a prototype
2. Use pre-annotated data for the prototype
3. Focus on the interface first and then replace pieces with more sophisticated components
4. Use a baseline for data that is not pre-annotated
5. Review Knight XML framework documentation
6. Distribute tasks and data usage among team members according to online and offline requirements
